

# MailGuard

Protect your Business from Email Threats  
with MailGuard – Total Email Security

## Solution Overview

JetStream's MailGuard is one of the premier providers of robust email security services for companies of any size, across nearly every industry. MailGuard provides enhanced email anti-virus, spam, and malware filtering SaaS and Appliance-based solutions. For over a decade, MailGuard has been a full proof protecting shield against email threats.

Our industry leading MailGuard Cloud service is deployed between the Internet and your network, while our appliance solution can reside behind or outside your network. These services create an effective boundary where inbound and outbound emails are scanned and unwanted messages are isolated, before they have a chance to disrupt your business.

## Why MailGuard?

JetStream's MailGuard stops the junk and lets the good email through. Messages which contain offensive, harmful, or policy violating content are held in quarantine, while any good messages continue on their way to the end user.

It acts as a messaging firewall to provide email security for Microsoft Exchange, Office 365, Novell GroupWise, Lotus Notes/Domino, and any SMTP compatible mail server.

Admins can easily quarantine messages which contain offensive or sensitive content (such as social security or credit card numbers) using our pre-defined options. If a message gets held in quarantine, users can quickly log in and release the message to their inbox.

## Feature Highlights:

- ✓ Spam/Malware Blocking
  - Anti-Virus Protection
  - Anti-Spoofing
  - Anti-Phishing Scoring
- ✓ Policy Enforcement
  - Sender Policy Framework (SPF)
  - Admin/User Trusted Senders Lists

## How do you buy our services?

### **Powerful and Effective Email Security Solutions Offered In Three Flexible Deployment Options**

#### *MailGuard Cloud – Cloud-based Email Security Service*

Elevate your email security to the cloud and stop spam, viruses and malware for good. This cost-effective, completely managed hosted service can be activated in a matter of hours.

#### *MailGuard Appliance – Email Security Appliance*

MailGuard Appliance allows you to command, control and protect your email within your own IT infrastructure. It intelligently identifies the newest spam techniques using advanced scanning to analyze the headers, body, and attachments of every email sent to you.

#### *MailGuard Virtual Appliance – Email Virtual Security Appliance*

For those who prefer virtualization over physical devices we offer a Virtual Appliance as a powerful, cost-effective, scalable solution. MailGuard Virtual Appliance offers a unique deployment capability where the Virtual Appliance image can be deployed on Microsoft Hyper-V, VMware, or XenSource virtual machines
